

Mechline Pro 50

Ergonomic wire balancer

Flexible and easy to manoeuver

Mechline Pro is an easily manoeuvered pneumatic wire balancer for loads up 50 kg. The Mechline lifting wire is extremely durable and can be used for up to 300,000 work cycles. With a frequent use of 200 operating cycles* per day, this gives a life span of 1500 working days - that is over five years!

Easy to integrate

Mechline Pro is very light-weight and provides a lifting stroke of up to 2 meter. It is preferably installed in a rail system or on a wall- or pillarmounted crane. The swivel is advantageously integrated with a pneumatic gripper and its controls. Even a simple mechanical gripper tool allows easy and ergonomic handling.

Anti-jump included

Mechline Pro is in its standard version equipped with an adjustable anti-jump function that locks the lifting motion in the event of uncontrolled lifting, for example, if the load is accidentally dropped. This provides a safe working environment for the operator.

Multiple versions available

With Mechline Pro, the operator can handle the load seemingly weightless; with an integrated control unit for various loads or a separate actuator for the selection of up to three different loads.

Wide range of applications

Typical applications for Mechline Pro is lifting work at assembly stations within the manufacturing industry, as well as material handling at transport and conveyor lines.

77

The wire is extremely durable and can be used for up to 300,000 work cycles*!

Mechline Pro 50

Balanced 2-weight

Handling of one balanced load; with an external actuator the operator selects "Load" or "Without load".

Balanced 3-weight

Handling of two balanced loads; with external actuator the operator selects "Load 1", "Load 2", or "Without load".

Slow speed function

The 2-weight and 3-weight pneumatic versions can be equipped with a slow speed function for a controlled lowering motion. Functional conditions are configured by the customer, and depend on the specific application.

Direct control

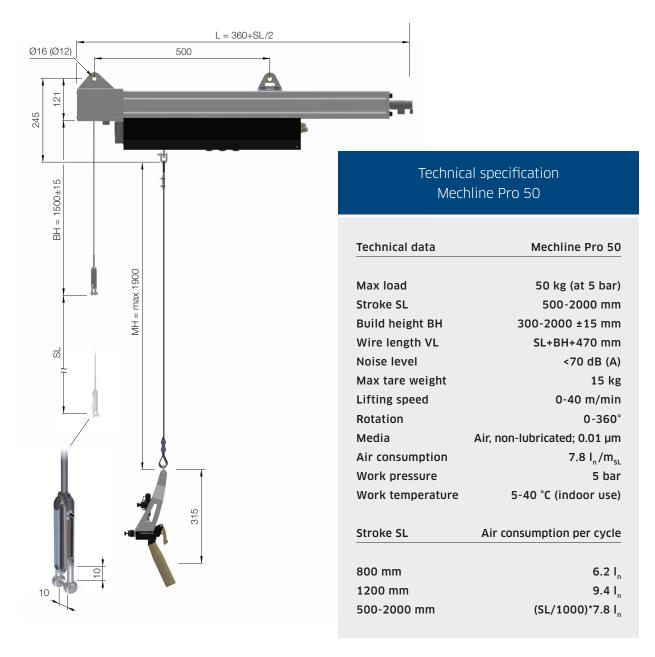

A precise and smooth handling of varying loads with a control unit. A convenient speed handle is available as standard control unit.

Load guard (option for Direct control)

The direct control version can be equipped with a load guard function. It is configured by the customer; e.g. to only allow activation of the release function if the gripper tool is unloaded. (For loads over 10 kg.)

Load limiting kit (option for Direct control)

The load limiting kit is used to restrict the lifting force of Mechline Pro. Both the lifting force at the state "no load" and "with load" can be restricted.

^{* 1} cycle = 1 movement up + down, regardless of the length of stroke and movement combination. Thus, a material handling operation can consist of a combination of several cycles.
